The Choice of Progressive Market Growers

All of the varieties listed in this catalog were bred and selected with one object in mind, and that is to produce profitable crops for the commercial grower. Whether your market is far or near, Henderson's seeds produce the crops that bring good returns.

The strain we offer of this well known variety is without doubt the best main crop beet in existence. Tops very uniform, medium to small in size. GREEN TOP WONDER

This is an early, extremely attractive variety for bunching. The tops are of a greyish-green color that remains green even late in the fall, when the tops of the ordinary Early Wonder turn to a deep purplish-red. The roots are nearly round during the early stages of growth, but at maturity are slightly flattened; exceptionally smooth, deep red in color. The interior is bright blood-red; practically free from zoning. A most desirable bunching variety.

Price	25c	75c	\$2.25	\$22.00

EXTRA EARLY EGYPTIAN. An extra early variety extensively used for forcing and frame culture. Tops small. Roots smooth, decidedly flattened and with a slender tap root, dark red in color. Flesh dark purplish red, zoned a lighter shade and of good quality.

PERFECTED DETROIT (Large Top)

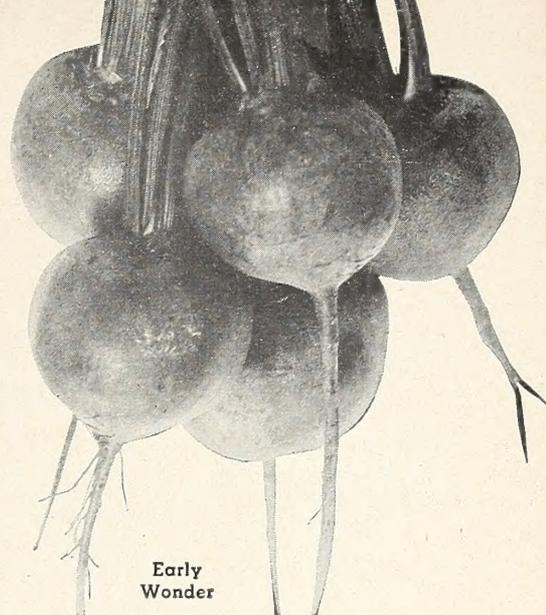

This improved strain of the large top type of Detroit Dark Red is preferred by many growers as a summer bunching beet because it produces larger, stronger tops especially in dry weather. 	oz.	¼ lb.	lb.	10 lbs.
Price	25c	75c	\$2.25	\$22.00

WINTER KEEPER—also called "LONG SEASON" and "NEW CENTURY"

A large, late, slow growing variety of high quality. However, the beets can be used at any stage of growth and regardless of their size and age, are always tender and deliciously sweet. The tops are large and green. The roots are large, tapering, and often reach a size of 6 inches in diameter. The flesh is dark red, entirely free from light zoning. A very desirable variety for roadside market or other special quality trade, but not well suited for commercial market.

	oz.	¼ lb.	lb.	10 lbs.
Price	25c	75c	\$2.00	\$19.50

	oz.	¼ lb.	lb.	10 lbs.
Price	25c	75c	\$2.00	\$19.50

PERFECTED EARLY WONDER (Large Top)

This improved strain of Early Wonder produces larger tops than the regular strain, and for this reason is preferred in many localities as a summer bunching beet. Even in dry weather the tops are large enough to permit satisfactory bunching. The roots are smooth, slightly flattened, globe shaped, deep purplish red. The flesh is dark red, almost entirely free from zoning.

Yellows Resistant Varieties

RESISTANT PREMIER (Extra Early)

Henderson's Premier Cabbage has always been popular with growers who want small compact plants for intensive cultivation. Now we have a "yellows" resistant strain that has retained the desirable characteristics of the original type. The plants are small, compact, with few outer leaves. The heads are medium small, round and although a few days later than the non-resistant strain, mature with exceptional uniformity.

	oz.	¼ lb.	lb.
Price	\$1.20	\$3.50	\$10.00

RESISTANT GOLDEN ACRE (Extra Early)

This strain has proven highly resistant to "yellows" and has made it possible for growers to produce a good crop of early Cabbage in many areas infested with this disease. The heads closely resemble our strain of regular Golden Acre, but mature a day or two later.

	oz.	¼ lb.	lb.
Price	90c	\$2.50	\$7.00

RESISTANT COPENHAGEN MARKET (Early)

This "yellows" resistant strain matures about the same time as our ordinary Copenhagen Market and the heads are about the same size. Where "yellows" is prevalent, growers may depend on this variety to produce an early crop of excellent round heads.

	oz.	¼ lb.	lb.
Price	90c	\$2.50	\$7.00

MARION MARKET (Second Early)

A "yellows" resistant type of Copenhagen Market and one of the first resistant strains to be developed. Marion Market has proven very profitable for many growers because of its dependability and heavy yields even on yellows infected soil. The plants and heads are larger than Copenhagen Market and require about 10 days longer to mature. The heads are round, very solid and excellent for shipping.

	oz.	¼ lb.	lb.
Price	80c	\$2.25	\$6.00

BUGNER WINTER (Late)

A late "yellows" resistant variety that is popular in many localities. The plants are hardy and vigorous. The heads are large, slightly flattened in shape and are ready for cutting a few days earlier than Wisconsin Hollander.

CHARLESTON WAKEFIELD—Henderson's

The heads are pointed, about twice as large as Early Jersey Wakefield and are ready for cutting about a week later. This strain is exceptionally resistant to freezing temperature, and for this reason is extensively used by Southern growers for fall planting, being harvested the following spring.

GREEN ACRE (NEW). This new variety is best described as a Green Golden Acre. The plants are very uniform, compact, and have few outer leaves. The heads are slightly larger than Golden Acre and require a few days longer to mature. The outstanding feature of Green Acre is the green color of the leaves, especially the inner leaves which make up the head. This characteristic is very desirable because the green color gives the heads a very fresh appearance when they reach market even after shipment to distant markets.

Crop Failure.

HENDERSON'S PREMIER. We recommend this variety for the market gardener desiring an extra early round-headed cabbage. In our Cabbage trials over a period of several years, Premier has proven to be 4 or 5 days earlier than Golden Acre. Other comparative trials throughout the country have confirmed our trials and Premier has been given Number 1 rating for earliness, uniformity of plant, size of head and maturity. Plant small and compact, which permits very close setting. Head very small in size, weighing approximately 3 pounds, very solid and of high quality.

INSURE YOUR INCOME BY USING HENDERSON'S FAMOUS TESTED SEEDS

Henderson's Famous Snowball

CAULIFLOWER

We have always controlled Henderson's Snowball and Primosnow Cauliflower, any statement to the contrary notwithstanding, and unless the seed is bought directly from us, you do not get the genuine, as we do not supply dealers. Sold only in sealed packets.

HENDERSON'S SNOWBALL

Excellent for Forcing—Dependable for Spring Crop—Unsurpassed for Fall Planting.

Market Growers the world over have used this strain year in and year out since it was first offered many years ago. We are continually receiving letters testifying to the dependability and general excellence of Henderson's Snowball. The widespread demand for this strain clearly indicates that it is adapted to the widest range of soil and climatic conditions of any variety of Cauliflower in existence.

The plants are of medium height, sturdy and vigorous. The outer leaves are of upright growth, while the inner ones fold over in such a way that the "flowers" are completely protected until they have reached a good size. The heads are uniformly large, deep, very solid, snow white, and under normal growing conditions are entirely free from leafiness. Attractiveness and quality are unequalled.

	1/2 oz.	oz.	1/4 lb.	lb.
Price	\$2.25	\$4.00	\$14.00	\$45.00

HENDERSON'S PRIMOSNOW

This outstanding extra early variety was introduced by us and is now recognized as the leading first early variety. The heads or "flowers" possess many of the characteristics of our famous Snowball—good form, good size, great depth, and a beautiful snow-white color, free from riciness or leafiness. The plant is sturdy; the foilage of fine form; the inner leaves being incurved give ample protection to the developing "flower". Primosnow is the earliest high quality Cauliflower that has ever been developed. It is ready to cut fully 8 to 10 days before such strains as Snowball or Erfurt and is of such uniform maturity, that practically the entire crop may be cut at one time. Highly recommended for market growers and shippers.

	1/2 oz.	oz.	1/4 lb.	lb.
Price	\$3.00	\$5.50	\$20.00	\$60.00

IMPROVED HOLLAND ERFURT

Also Called **SNOWDRIFT** and **WHITE MOUNTAIN**.

A popular variety and used extensively in all sections where Cauliflower is grown. The plants are vigorous, uniform, and the inner leaves fold over the head, thus giving good protection until the heads are well developed. The heads are large, deep, very white, of excellent appearance, and mature a few days earlier than Snowball.

	1/2 oz.	oz.	1/4 lb.	lb.
Price	\$2.75	\$5.00	\$18.00	\$55.00

SUPER SNOWBALL

This is an extra early strain of the Snowball type. Besides being extra early, the heads or "flowers" mature with greater uniformity, making it possible to harvest a large percentage of the crop in the first cutting.

The plants are vigorous and strong. The leaves, especially the inner ones, are well folded or curled over the heads. The heads are large, uniform in size, deep, and solid. They mature early and many times the entire crop is harvested before any heads of the later types are ready. One of the most profitable varieties for market.

	1/2 oz.	oz.	1/4 lb.	lb.
Price	\$2.75	\$5.00	\$18.00	\$55.00

EARLY SNOWWHITE (SPECIAL NO. 25). We are pleased to offer this new outstanding early variety. It has shown up well in our Cauliflower trials, and the commercial growers who have tried out this new type, are very enthusiastic about its merits. The plants are sturdy and somewhat taller growing than Primosnow. The inner leaves fold over the heads and overlap each other in such a way that added protection is given to the "flowers" until they are well developed. Even the outer leaves which are straight and upright, are inclined to curve inward at the tip.

The heads are large, of a uniform size, very deep, solid, exceptionally heavy, pure white, and of the highest quality. The well formed tight curd gives the heads a most attractive appearance. In season **EARLY SNOWWHITE** is a few days later than Primosnow, but practically as uniform in maturity.

	1/2 oz.	oz.	1/4 lb.	lb.
Price	\$2.75	\$5.00	\$18.00	\$55.00

WHITE ROCK. There are so many stocks, good, bad and indifferent, of the well-known Erfurt Cauliflower that we have for years been looking for a strain that would be distinctly superior. We think we have now found one that is in a class by itself. Henderson's White Rock, while not being quite so early as Primosnow, is earlier than Erfurt and Snowball. The plant is particularly vigorous and produces a deep shaped, pure white head of superb quality, well covered and protected.

	1/2 oz.	oz.	1/4 lb.	lb.
Price	\$2.25	\$4.00	\$14.00	\$45.00

Owing to crop shortages on many items and also because an unusually heavy demand is anticipated, it is advisable to place your order early.

PROTECT YOUR CORN CROP with Semesan Jr.

1½ oz. will treat 1 bushel of seed.

Semesan Jr. dry treatment of hybrid Sweet Corn helps to reduce the loss of seed through rotting, which is caused by the harmful fungi such as Diplodia and Gibberella, which are often present in the soil. Besides preventing missing hills due to this cause, it also improves stands and sturdiness of the corn seedlings and generally increases the yield. It is safe and easy to apply, and the cost per acre is negligible.

Henderson's Famous New York and Imperial Types

NEW YORK (HENDERSONS')

We introduced this noted variety many years ago. It has been extensively grown in all sections of the country, and although not as popular today since the introduction of the earlier New York types, is still used in large quantities in many localities. The plants are large, with dark green outer leaves, which are slightly curled on the edges. The heads are large, very solid, well blanched, crisp, sweet, and are slow to run to seed. Our strain is noted for its uniformity and large sized heads.

	oz.	¼ lb.	lb.	10 lbs.
Price	35c	\$1.00	\$3.00	\$29.50

NEW YORK NO. 12

This is an earlier selection from Henderson's New York. It is very sure heading and better adapted to warm weather than the original type. The plants are compact with few outer leaves, and head with great uniformity. The heads are slightly flattened, solid, and of a large even size. The most dependable of the New York types, especially under varied growing conditions.

	oz.	¼ lb.	lb.	10 lbs.
Price	35c	\$1.00	\$3.00	\$29.50

NEW YORK NO. 515

An early type of New York which in appearance resembles New York No. 12, but is a few days earlier and brighter green in color. The heads are well formed, solid and very attractive. It is also dependable in heading and well adapted to a wide range of soil and growing conditions. Highly recommended.

Price	35c	\$1.00	\$3.00	\$29.50

IMPERIAL NO. 44

This new Iceberg type was developed by Dr. I. C. Jagger of the U. S. Department of Agriculture. During 1936 and 1937 test plantings of Imperial No. 44 were made in various lettuce growing muck districts of the East. The variety looked so promising in these tests, that lettuce growers throughout the muck sections are very enthusiastic about the possibilities of this new variety. Although not extensively tried on upland soils, we believe it will be suitable there as well. Imperial No. 44 produces large, hard, well formed heads, uniform in size. In comparative test plantings, it has produced a good percentage of hard heads when nearby plantings of commercial strains proved worthless.

	oz.	¼ lb.	lb.	10 lbs.
Price	35c	\$1.00	\$3.00	\$29.50

IMPERIAL NO. 847

This new black seeded New York type has proven very satisfactory in many sections of the East. It is particularly well suited to upland soil. We have seen several commercial plantings that were so even in maturity that the entire crop was ready for cutting at one time. Plants medium large, with bright green leaves. Heads round, large, solid, crisp and of good quality.

ASTERS

The Improved Strains of China Asters, the showiest and most useful of our Summer Cut Flower Annuals, are now staging a remarkable comeback with the development of the wilt resistant strains.

WILT RESISTANT STRAINS

Through the use of wilt resistant seed, success may be had where the soil is infected with wilt fungus, where it has been impossible to grow perfect flowering plants. It is not claimed, however, to be immune from Aster "yellows" and other Aster diseases or insect pests.

Henderson's Famous Invincible

The flowers are the most beautiful formed of all large Asters. When well grown the flowers of Henderson's Invincible Asters average 3½ inches across; 4-inch flowers are quite common, if grown especially for cut flowers and the side branches pruned, allowing a plant to carry not over 8 or 10 flowers, one flower to a stem.

Sow The "Henderson" Lawn Grass Seed

and Obtain a Grassy Carpet of Unrivalled Emerald Green
IN FOUR WEEKS FROM SOWING IT IS READY FOR MOWING

Henderson's celebrated Lawn Grass Seed Mixture has been thoroughly tested by a country-wide use during three-quarters of a century. It is the fruit of years of our personal experience and study, coupled with that of many of America's foremost gardeners, who steadfastly maintain and unite with us in saying that it has no superior for American conditions and the American climate. The rapidity with which it will form a deep green velvety turf, has been the delight of gardeners since its introduction, for, under ordinary conditions, the bare soil will be clothed with an emerald carpet of living green in four weeks' time.

STANDARD LAWN SEED

This is a blend that is far superior to the low priced lawn seed usually offered. It should be of special interest to florists and contractors for use on development projects. Although this seed is not recommended for a permanent lawn, like the Henderson blend, it does not, on the contrary, give a flash-in-the-pan, but produces a fine durable turf. Sow at the rate of 1 pound to 200 square feet.

TOUGH TURF

The turf required for outdoor sports must be closely interwoven, firm, elastic, smooth, and durable to stand the wear and tear. These requirements are met in this mixture, which is composed of fibrous, deep-rooting Grasses that spread and intermingle. The seeds are blended in the proper proportions to form and maintain a tough matted sward, constantly green, even in dry weather.

TERRACE SOD

This is a special mixture of Grasses best suited for sowing on terraces, embankments and hill-sides; Grasses that produce long, strong, spreading roots, thus preventing heavy rains from washing them out; that will withstand drought, thrive on shallow soils, and at the same time produce a rich, velvety-green turf throughout the season.

SHADY NOOK

The Ideal Mixture for Shaded Areas

On nearly all lawns there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into Grass, but with this mixture there need be no further difficulty. It is a combination of fine, dwarf growing, evergreen varieties, which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is frequently "sour," and if the drainage is defective it is apt to be covered with moss and coarse Grasses. In such cases an application of slaked lime, at the rate of one hundred pounds to each thousand square feet, or two tons to the acre, is an excellent corrective and sweetener, but the moss should be first raked off.

SPECIAL "BENT FORMULA"

A combination of the finest re-cleaned Grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so largely used in the finer Putting Greens of today.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn.

SEASIDE

Our "Seaside" mixture will make a good turf of green on sand where the finer Grasses will not thrive, of course, the sand must be top-dressed with not less than 2 inches of soil before even our "Seaside" Grass Seed is sown, to enable the young Grass to get a start, after which the long roots—peculiar to the varieties we used in this mixture—drive down deeply in the sand and remain permanently self-sustaining, if attention is given to sprinkling during dry weather.
